

Company description

IntelliMind LLC is a stealth mode startup based in USA. It develops products within Intelligent assistant space for Financial Services domain.

This is a knit-tight team of talented engineers, data scientists as well as entrepreneurs. The advisory board contains serial entrepreneur, trader as well as visionary technologists.

MEAN Stack Developer, Intelligent Assistant Platform

We are looking for a software engineer to drive the design and implementation of key components of our Intelligent Assistant platform. The MEAN Stack Software Engineer will be responsible for building highly scalable micro-service oriented front-end solutions. Will be responsible for creating the most optimal software design that can scale and perform in a direct to consumer environment. Will be directly involved in problem solving and resolution of day-to-day design issues. Will translate the high-level architecture to software design and code.

You will also be responsible for developing complex financial algorithms, and integration with front-end. Will work closely with other team members to drive best in class software design, development & deployment techniques.

This is an equity partnership opportunity, where everyone is a partner. Every experienced engineer is eligible to receive 1% equity within IntelliMind LLC.

Skills

- Design and development experience using JavaScript (ES6 onwards, TypeScript, JQuery) experience.
- You write automated tests (unit, functional, integration, system, TDD, BDD) - this is essentially important to us, to the point of being a deal- breaker.
- Node.js experience would be a nice-to-have.
- You like working with modern SPA frameworks (React, Angular, Ember, Due, etc...).
- Web Development Experience for High-Traffic, Public Facing web applications.
- Experience with cloud technologies is a plus
- Creating secure RESTful-based web services in XML and JSON, Javascript, JQuery
- Continuous integration (Jenkins/Hudson) and version control (SVN, Git, VSS)
- Use of build managers (Grunt, Gulp, Webpack).
- Use of managers (NPM, Yarn, Bower, Browserify).

Desired Traits, Skills and Experience

- Motivated, independent, passionate, driven and goal-oriented are core traits that will make successful member of our dream team.
- Must demonstrate a passion for technology and how it impacts business.
- We are looking for candidates with a qualitative and quantitative background with a degree in majors such as Computer Science, and/or Computer Engineering
- The ideal candidate is curious and versatile, and eager to tackle complex problems. The position offers a diverse range of projects and the opportunity to quickly have a direct impact upon the organization.
- Candidates should be able to learn on the fly and be capable of taking responsibility for delivering defined objectives.

Culture

- We foster culture of working for yourself. So you'll be joining as a partner rather than intern.
- We are an inclusive culture that encourages collaboration.
- It's an environment where everyone's opinion is respected.
- We reward initiative in our organization.

Distinct Advantage

The key advantage of above position will be, every employee will gain significant knowledge about Financial Markets, Trading Algorithms, and Investment Decisions. This knowledge can be directly applied to better investment decisions.
